Message:

Examiner Huynh,

Attached is a proposed amendment regarding Application Serial No. 08/469,612. After reviewing the claims and applied prior art in light of our discussion, we propose to amend the claims to set forth that the receiver is programmed with a sequence of channel and selects the next channel of the sequence upon detecting the presence or absence of a control signal. Example 5 of the specification (pp. 248-271) supports this amendment. In particular, a sequence of channels is disclosed on page 249, selecting the next signal in response to detecting a signal is disclosed at page 253 and selecting the next channel in response to detecting the absence of a signal is disclosed at page 258.

PMC has previously asserted that the claims in this application are supported by the parent application 06/317,510 filed November 3, 1981. With the entry of this proposed amendment, PMC will no longer assert the 1981 priority date for these claims.

Please contact with any further comments or questions that you may have regarding this matter.
